Examiners Amendment

1. In Applicant's Response dated 01/08/2010, and IDS filed on 01/25/2010 applicant presents specific arguments that led to an Examiner interview on 03/23/2010. The resulting examiners amendment is attached. All previous objections/rejections are hereby withdrawn.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with George Yee on 03/18/2009.

In the claim, please see the amended claim in the attached PDF document.

Interview Summary

The examiner contacted applicant's representative on 03/18/2010 to discuss the amendment entered on 01/08/2010. The examiner discussed the limitations of the claim that contained an "or" condition and wanted to clarify specific phrases in the claim. The interview culminated with an agreement for applicant to remove the "or" from the claim and chose one path for determining the time ranges.

Allowable Subject Matter

2. Claims 1-3, 9, 13-26, 32, 36-49, 55 and 59-69 is/are allowed.
3. The following is an examiner's statement of reasons for allowance

Art Unit: 2179

Claims 1, 24, 47

The closest prior art of Wellner teaches a system of accessing media by reading a bar code printed on a paper document. The bar code contains instructions for directing the computer to retrieve the URL in the barcode. Wellner teaches the user can access a magazine or newspaper article or even control a VCR. The system of Wellner retrieves the information for play on the computer of Wellner. Wellner teaches the barcodes can comprise information but does not suggest time ranges for media occurring between a start and end time and also does not teach or suggest a process of determining the time range from the identifier on the barcode by adding a first time amount to a time value to produce a second time and subtracting a time amount from a time value to produce a first time.

The prior art of Kajitani also teaches a barcode reader that allows a user to retrieve television programs with start and stop times. Kajitani allows the user to retrieve a given program that occurs at a given time by reading the information from a scanned barcode on a paper medium. However, Kajitani does not teach or suggest a process of determining the time range from the identifier on the barcode by adding a first time amount to a time value to produce a second time and subtracting a time amount from a time value to produce a first time. The difference in the art is that neither Kajitani nor Wellner suggest performing time range determinations to retrieve sections of multimedia from a document.

Therefore, the prior art above does not suggest either alone or in combination the features of the amended claims as outlined above and thus they are allowed over the prior art.

101 issues

The outputting for play on the computer step in the limitations of claim 1 are interpreted as tying the method to a display, which meets the test under Bilski. The system claim 24, recites requisite hardware elements to functionally intertwine the recited material to a device,

Art Unit: 2179

therefore comply with MPEP 2106.01. The computer product of claim 47 with the computer readable storage medium comprising instructions to direct a computer to perform steps also appears to comply with MPEP 2106.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven B. Theriault whose telephone number is (571) 272-5867. The examiner can normally be reached on M-F 7:30 - 4:00 PM.
